ALEXIS CORPORAL

San Pablo City, Laguna, Philippines 4000 | +63 945 468 1904 | corporal461@gmail.com | github.com/Alexis12119

PROFESSIONAL SUMMARY

Full-Stack Developer and IT honors graduate (Cum Laude) with a track record of designing complete software systems, secure microservices, and database architectures. Awarded Best in OJT and Best Capstone Project for technical execution. Specializes in building end-to-end solutions that automate manual workflows, enforce strict data consistency, and secure multi-tier institutional operations.

TOOLS & TECHNOLOGIES

Languages: TypeScript, Go, Python, Java, SQL, Dart, JavaScript
Frameworks: Next.js, Spring Boot, Fastify, FastAPI, Flutter, Tkinter, Prisma ORM, Gorilla Mux
Infra & DB: Docker, Nginx, Vercel, PostgreSQL, MySQL, Supabase, WebSockets, Tesseract OCR
Tools: Postman, JMeter, IntelliJ IDEA, VS Code, Neovim, Git

WORK EXPERIENCE

Freelance Full-Stack Developer May 2023 - Present

- Designed relational database schemas supporting inventory tracking, appointment scheduling, and document management systems used by local schools, veterinary clinics, and manufacturing facilities.
- Automated a manual inventory tracking process by building a custom QR code generation pipeline and a transactional backend to ensure absolute data consistency.
- Developed a desktop-and-mobile veterinary management system featuring role-based access control and a local database synchronization layer for offline resilience.
- Optimized web application layouts and asset delivery to drastically reduce client-side rendering latency.

Bakawan Data Analytics, Inc. Feb 2026 - May 2026

Web Developer Intern (Awarded 3rd Best System out of 9 teams)

- Worked closely with a software engineering team to translate core system blueprints into scalable web applications.
- Developed backend authorization components, including multi-tier user role validation and detailed event auditing logs.
- Tested API stability and backend request handling using automated test scripts in JMeter and Postman.

KEY PROJECTS

Digital Information Board Management System (DIBMS) Jul 4, 2026 - Jul 8, 2026

Next.js, TypeScript, Tailwind CSS, Prisma, Supabase, Vercel

- Automated weekly information board updates by converting uploaded multi-page PDFs into optimized web assets, completely eliminating manual screen configurations for administrators.
- Architected a centralized web-based CMS to dynamically sync scheduling data across distributed hardware monitors in real time.
- Engineered an automated scheduling engine that processes and displays content dynamically based on localized time zones.

OCR Drawing Extractor Feb 2026 - Jun 2026

Python, FastAPI, Tesseract OCR, pypdf, Tkinter

- Automated the extraction of critical metadata from highly dense engineering blueprints, replacing manual data entry for a desktop utility.
- Drastically improved text extraction accuracy on complex layouts by introducing coordinate-based spatial scanning and image noise-reduction filters.
- Prevented application freezing during heavy processing workloads by implementing Python parallel processing loops to bypass language resource limitations.

DLSP Registrar DocsTrack Feb 2026 - May 2026

Next.js, TypeScript, Go, PostgreSQL, WebSockets, Postman, JMeter

- Replaced a university registrar's manual, paper-based document workflows by architecting an online document request and multi-stage tracking system.
- Eliminated the need for user page-refreshes by implementing real-time event notifications using WebSockets to broadcast instant status updates.
- Secured sensitive student records and protected backend resources from abuse by writing custom token-based (JWT) authentication layers and API rate-limiting middleware.

BakerPass Aug 2025 - Jan 2026

Next.js, Fastify, Flutter, MySQL, Nginx, Docker

- Secured physical facility access for an industrial coconut manufacturing plant by designing a web and Android visitor logging system to replace paper logbooks.
- Enforced strict boundary security by mapping out administrative verification flows that restrict user access to specialized facility zones based on clearance levels.
- Containerized the entire application stack using Docker and configured Nginx reverse proxy routing to handle secure, self-hosted deployment.

EDUCATION

Dalubhasaan ng Lungsod ng San Pablo (DLSP) 2022 - 2026

*Bachelor of Science in Information Technology (Software Development Major) — **Graduated Cum Laude***

TRAINING & CERTIFICATIONS

- **Best in OJT & Best Capstone Project Awards** — Top Academic Performance in Software Development Major, 2026
- **AWS Certified Cloud Quest: Cloud Practitioner** — AWS Training & Certification, March 2026
