

ALEXIS CORPORAL

San Pablo City, Laguna, Philippines 4000 | +63 945 468 1904 | corporal461@gmail.com | github.com/Alexis12119

PROFESSIONAL SUMMARY

IT graduate (Cum Laude) with practical experience building web and mobile applications. Skilled in system logic, database design, and implementing real-time features. Recognized with Best in OJT and Best Capstone Project awards for delivering working software solutions.

EXPERIENCE

Freelance Developer – Self-Employed | May 2023 – Present

- Write code, build databases, and deploy web and mobile applications for local business clients.

Web Developer Intern – Bakawan Data Analytics, Inc. | Feb 2026 – May 2026

- Built the university's document request and tracking system to replace slow manual paper handling.
- Added secure features including role-based logins, real-time status updates, security verification, and activity logs.
- Tested backend performance under heavy user traffic using JMeter and checked API connections with Postman.

SELECTED PROJECTS

DLSP Registrar DocsTrack | Feb 2026 – May 2026

Technologies: Next.js, TypeScript, Go, PostgreSQL, WebSockets, Postman, JMeter

- **Problem:** Students and school staff spent too much time dealing with hard-to-track paper document requests.
- **What I Did:** Programmed a web app with live status updates, instant email notices, file uploads for payment receipts, and data exports to Excel and PDF formats.

OCR Drawing Extractor | Feb 2026 – Jun 2026

Technologies: Python, FastAPI, Tesseract OCR, pypdf, Tkinter

- **Problem:** Extracting specific text from dense blueprints manually takes too much time and traditional OCR tools get confused by graphics.
- **What I Did:** Programmed a tool that reads raw text layers directly from vector PDFs, and only runs OCR on the top and bottom sections of scanned pages to avoid image noise. Added an interactive screen where users draw box boundaries over text regions.

BakerPass | Aug 2025 – Jan 2026

Technologies: Next.js, Fastify, Flutter, MySQL, Nginx, Docker Compose

- **Problem:** Franklin Baker Company needed a safe, structured way to manage visitors and get medical clearances before individuals entered sensitive factory zones.
- **What I Did:** Built a system supporting 6 user roles (including clinic nurses and gate security). Users can book appointment slots, fill out health declarations, and see live check-in steps synced across web and mobile via WebSockets.

EDUCATION

Dalubhasaan ng Lungsod ng San Pablo | 2022 – 2026

- Bachelor of Science in Information Technology (Software Development Major) – Graduated **Cum Laude**

ACHIEVEMENTS & CERTIFICATIONS

- **AWS Certified Cloud Quest: Cloud Practitioner** – AWS Training & Certification, March 2026
- **Best in OJT** – Top rating among all BSIT Software Development Major students, 2026
- **Best Capstone Project** – Franklin Baker Visitor Management System (BakerPass), 2026

TECHNICAL SKILLS

Languages: TypeScript, Go, Python, JavaScript, SQL

Frameworks & Libraries: Next.js, Fastify, FastAPI, Flutter, Tkinter, pypdf

Databases & Tools: PostgreSQL, MySQL, Docker, WebSockets, Tesseract OCR, Postman, JMeter, Nginx
